Step 1

First access the main menu and click on "Backup" to enter the main backup menu.

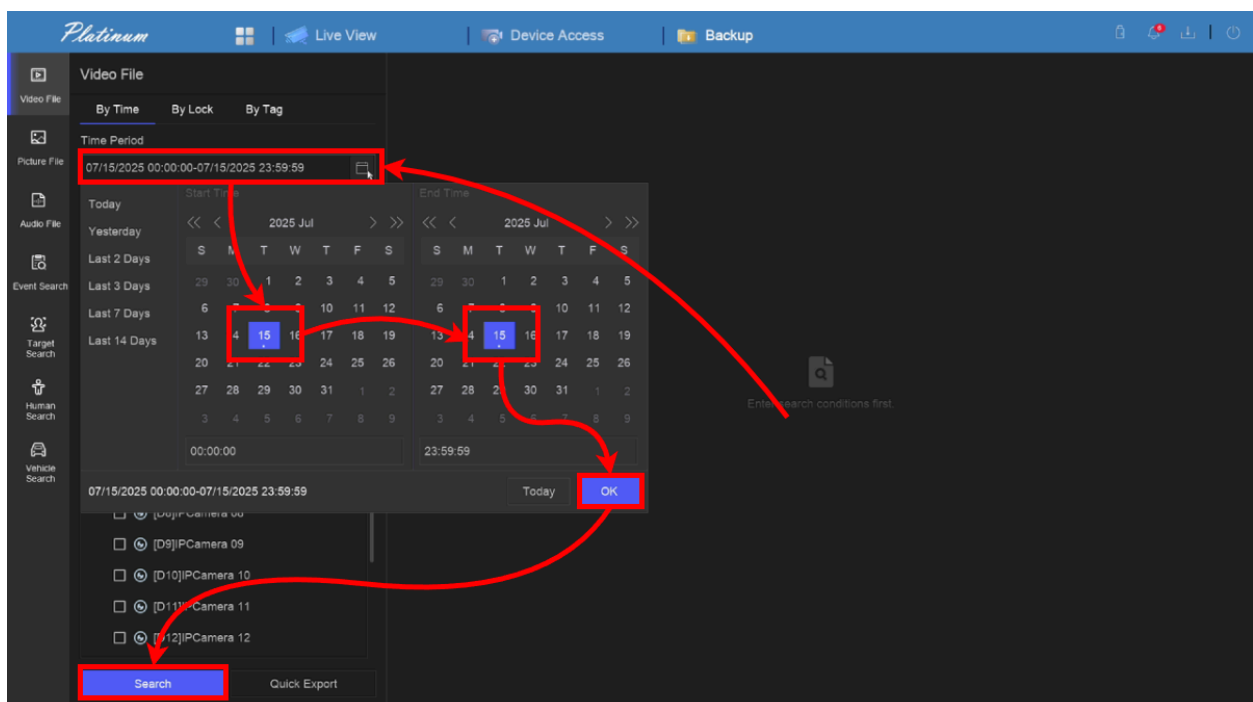

Step 2a

Step 2 can be done in any order. Select the camera(s) that are to be backed up.

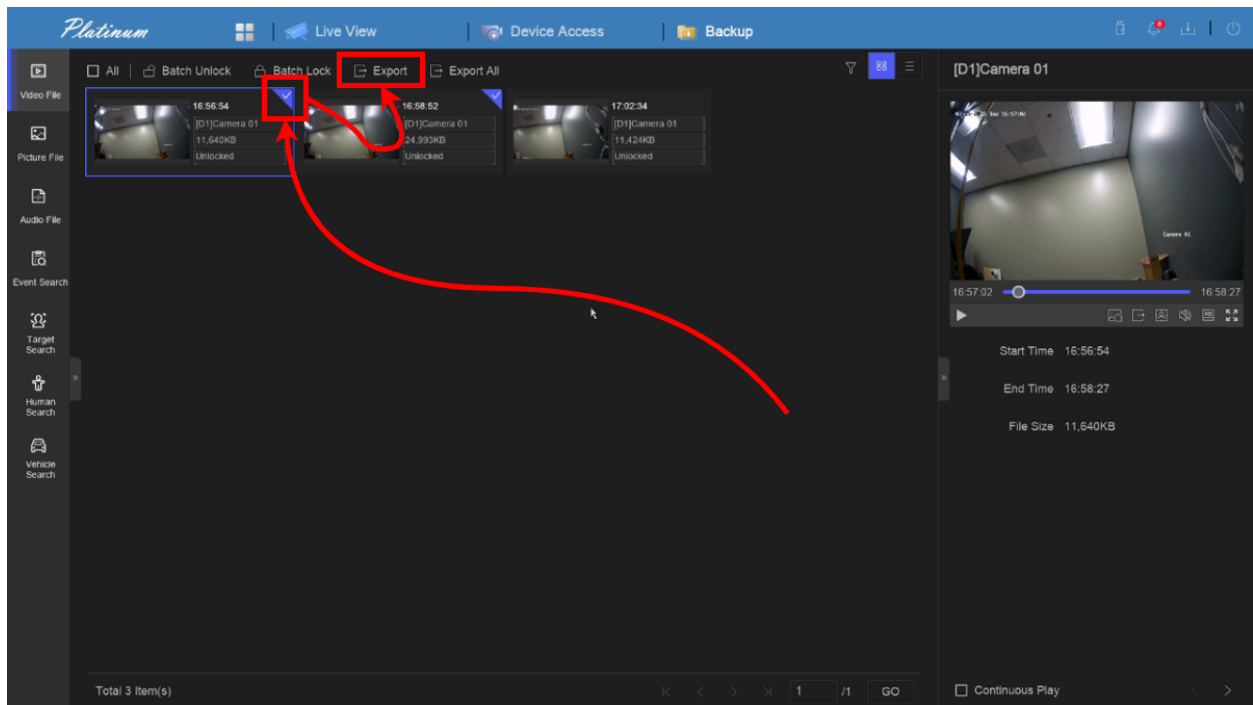

Step 2b

Choose the time frame that will be searched for video files and click "Search" at the bottom.

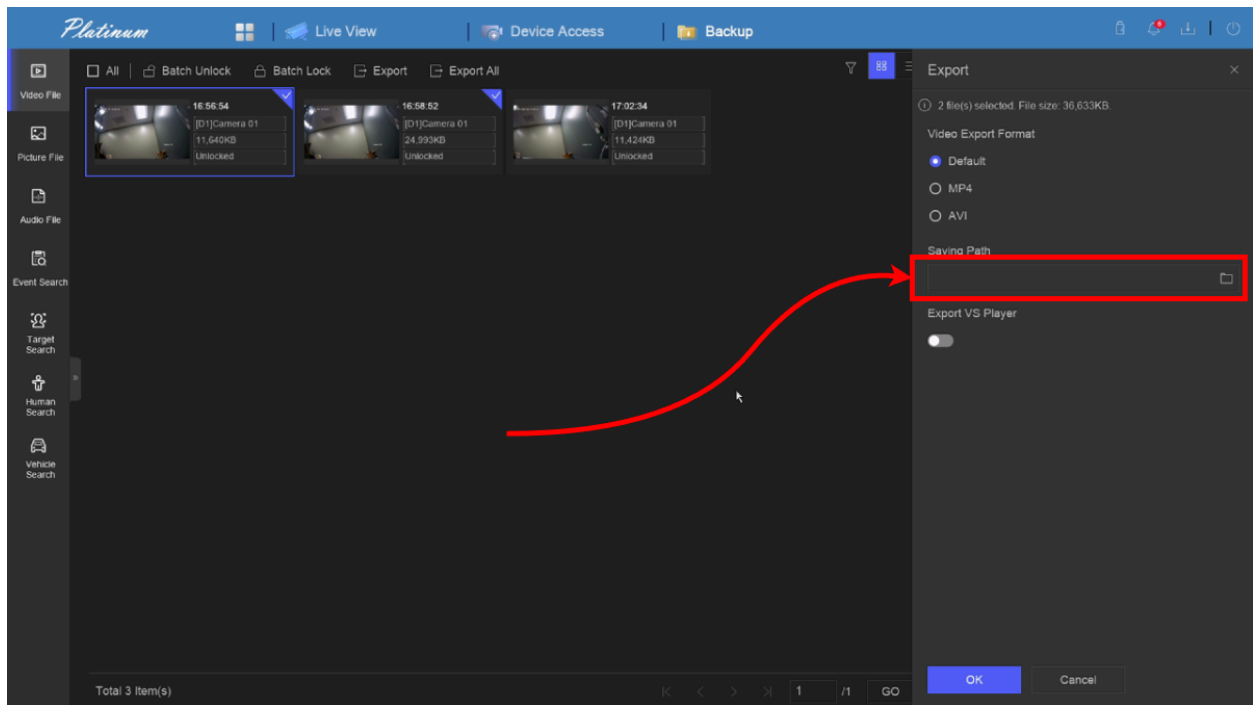

Step 3

Select the files that are to be backed up. Notice that they will have a white check mark in the top right of the file listing. Click "Export" at the top afterwards.

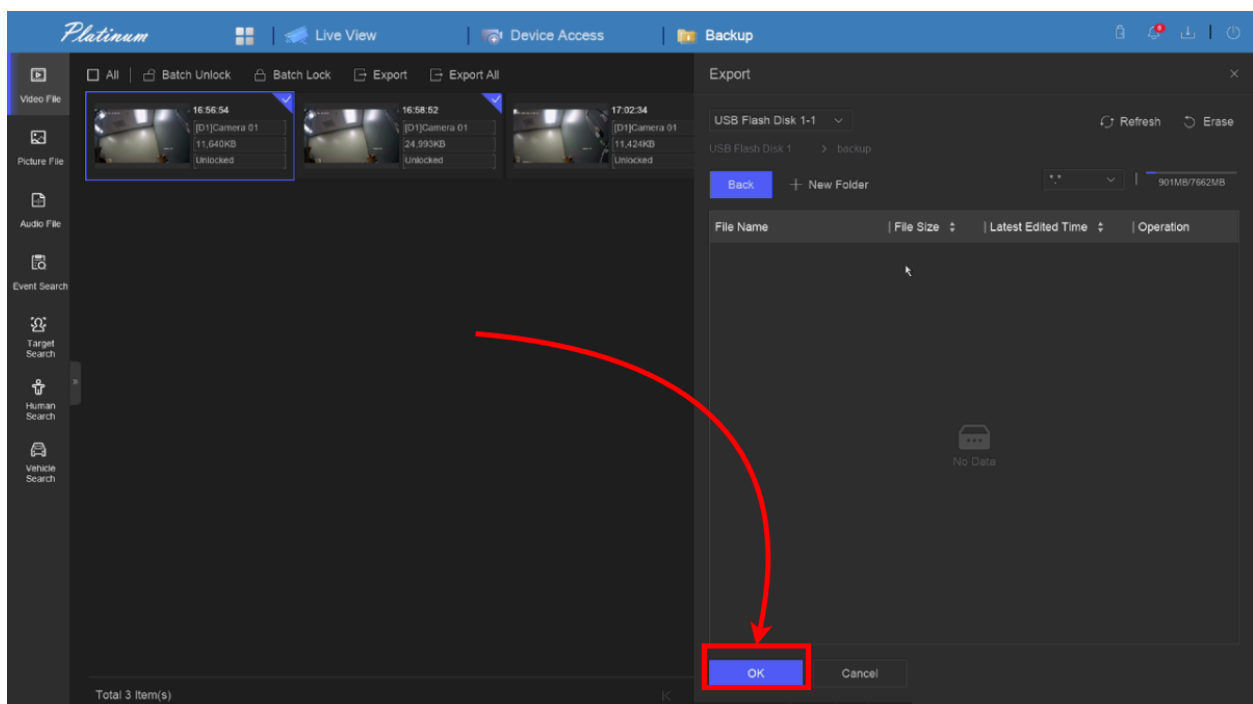

Step 4

Make sure that a USB drive is inserted into the recorder. On the menu in the right side that appears, click on the folder icon in the blank field under "Saving Path".

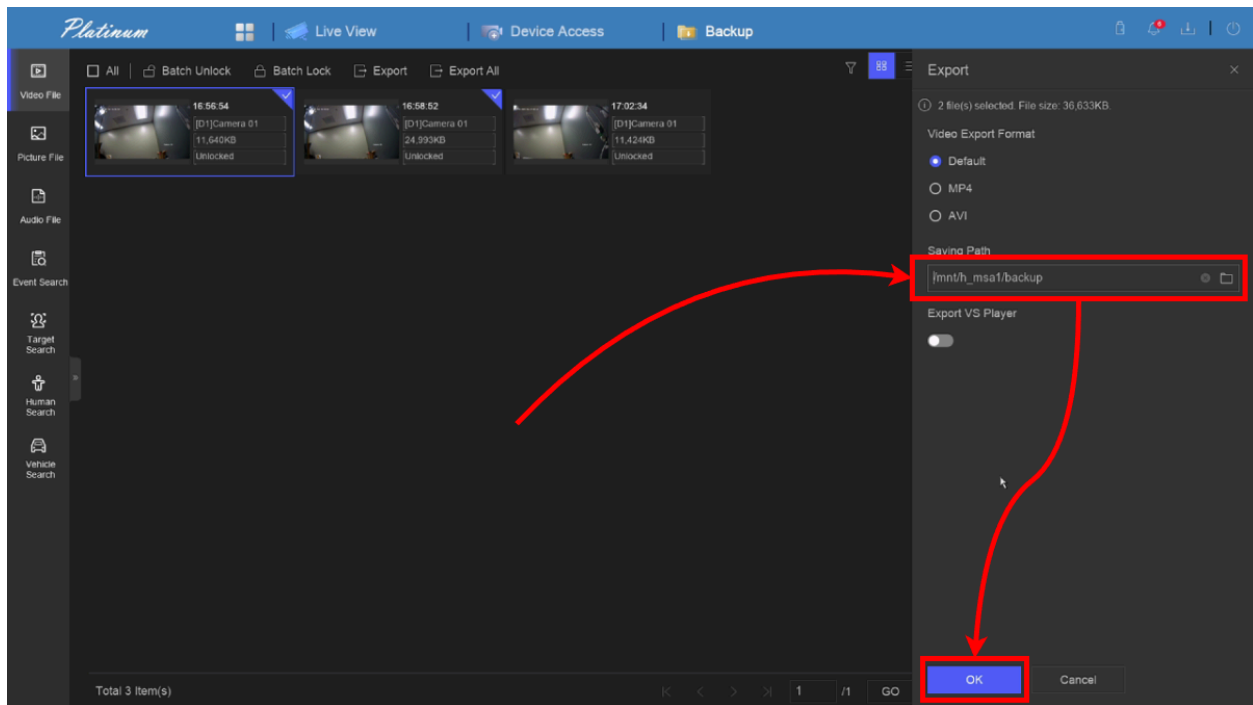

Step 5

In the new menu that appears, select the folder that files will be saved to and then click "OK"

Step 6

Confirm that the saving path is the correct location and then click "OK" at the bottom. The files will begin backing up.

Step 7

There won't be any notification when the files will be finished uploading. Check the progress by clicking on the backup icon in the top right of the screen. Before unplugging the USB, make sure all files show 100% completion.
