

Basic Playback

<input checked="" type="checkbox"/>	Created	@July 17, 2025 8:33 AM
<input checked="" type="checkbox"/>	Tags	Playback

Starting up playback hasn't significantly changed from the v4 UI. First click the checkbox for the camera that is to be played back and then select the date.

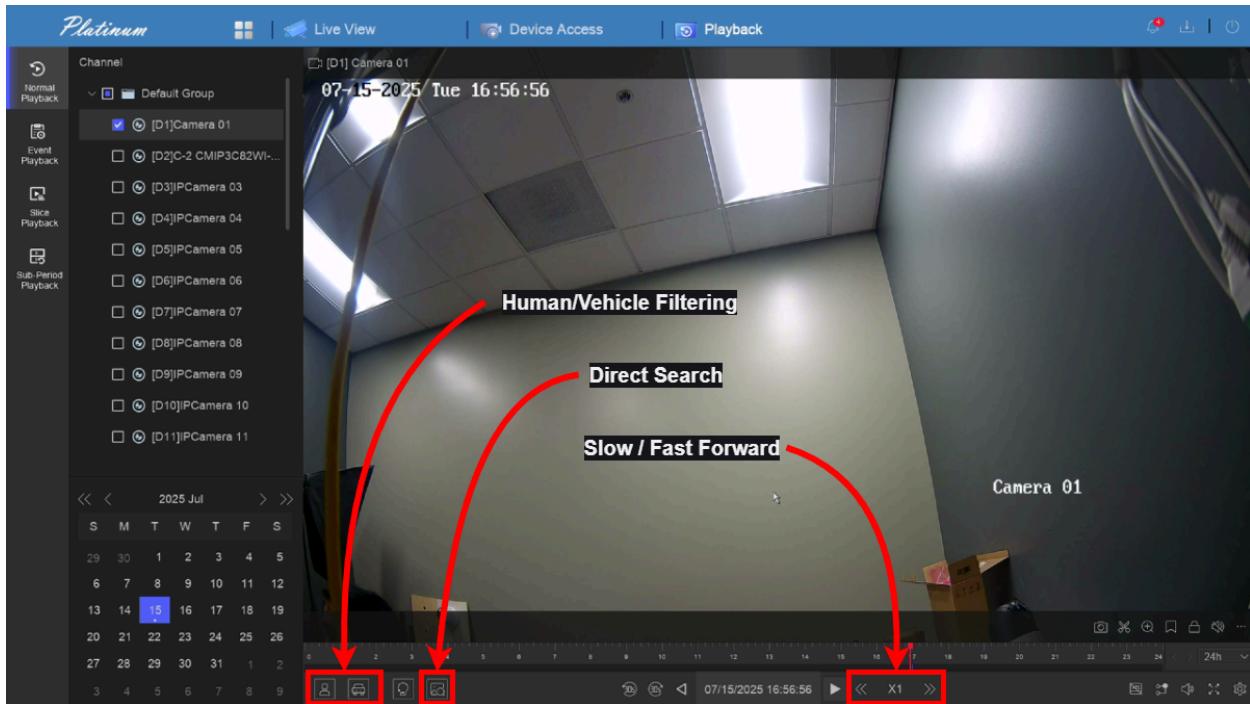

While the video is playing back, there are some buttons under the timeline that can be utilized to augment the playback experience.

There are:

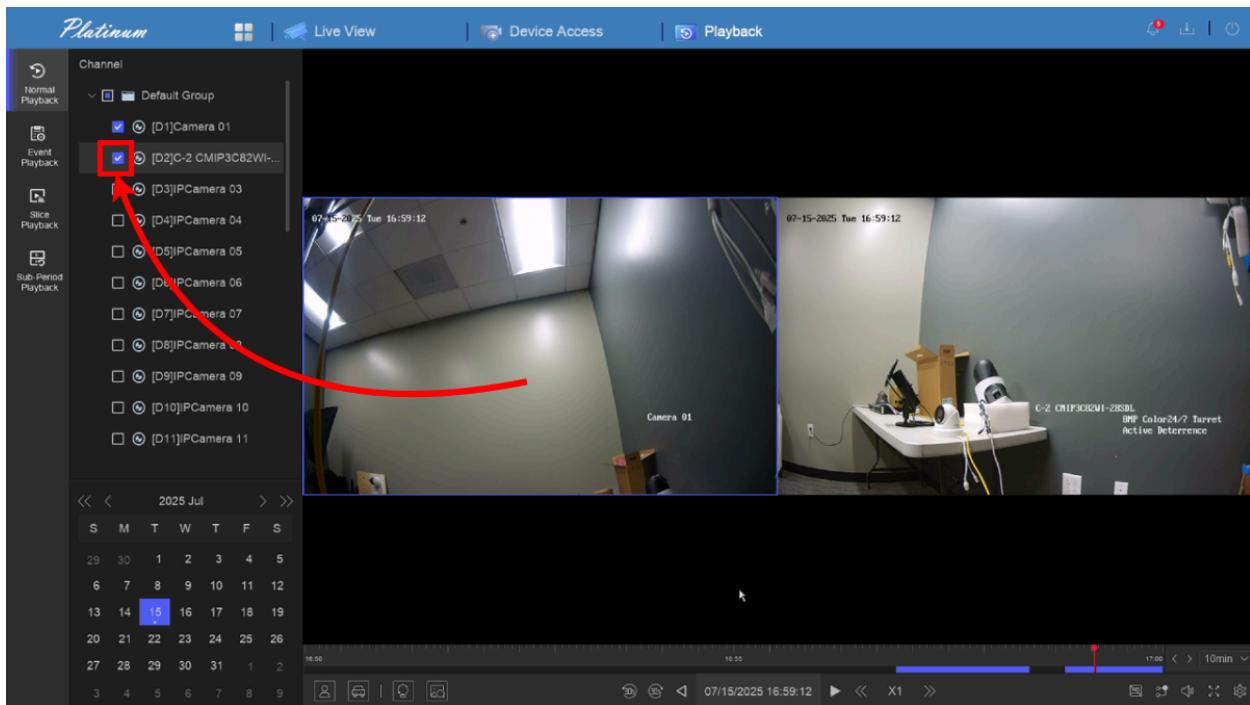

Filtering options for Human/Vehicle

Direct Search options when targets are in frame

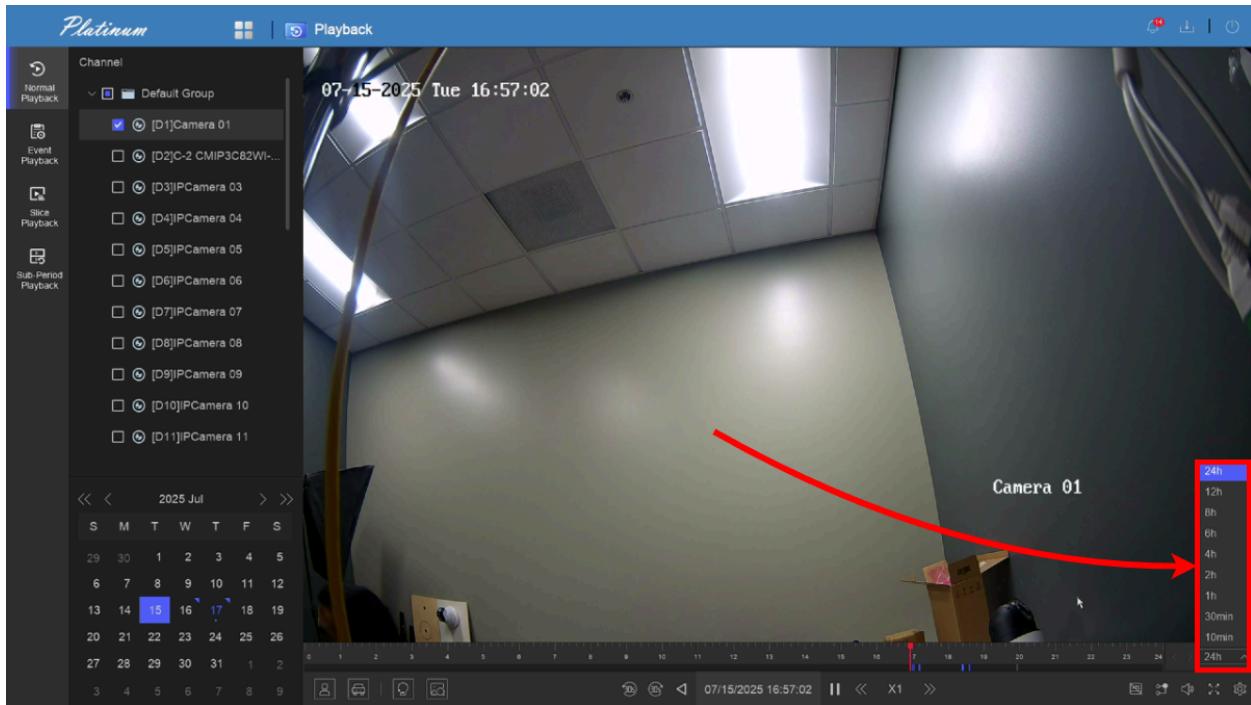

Slow and Fast forward options

It is possible to have multiple cameras playing back as well. Please be sure to refer to the recorders maximum decoding capability when doing simultaneous viewing. All that needs to be done is to select multiple cameras.

If finer control over the time is needed, clicking the "24h" button in the bottom right gives option for shorter time intervals. These shorter intervals will allow easier scanning through recording to find desired footage.

A snapshot will also be shown when mousing over the timeline with the mouse.
