Installation

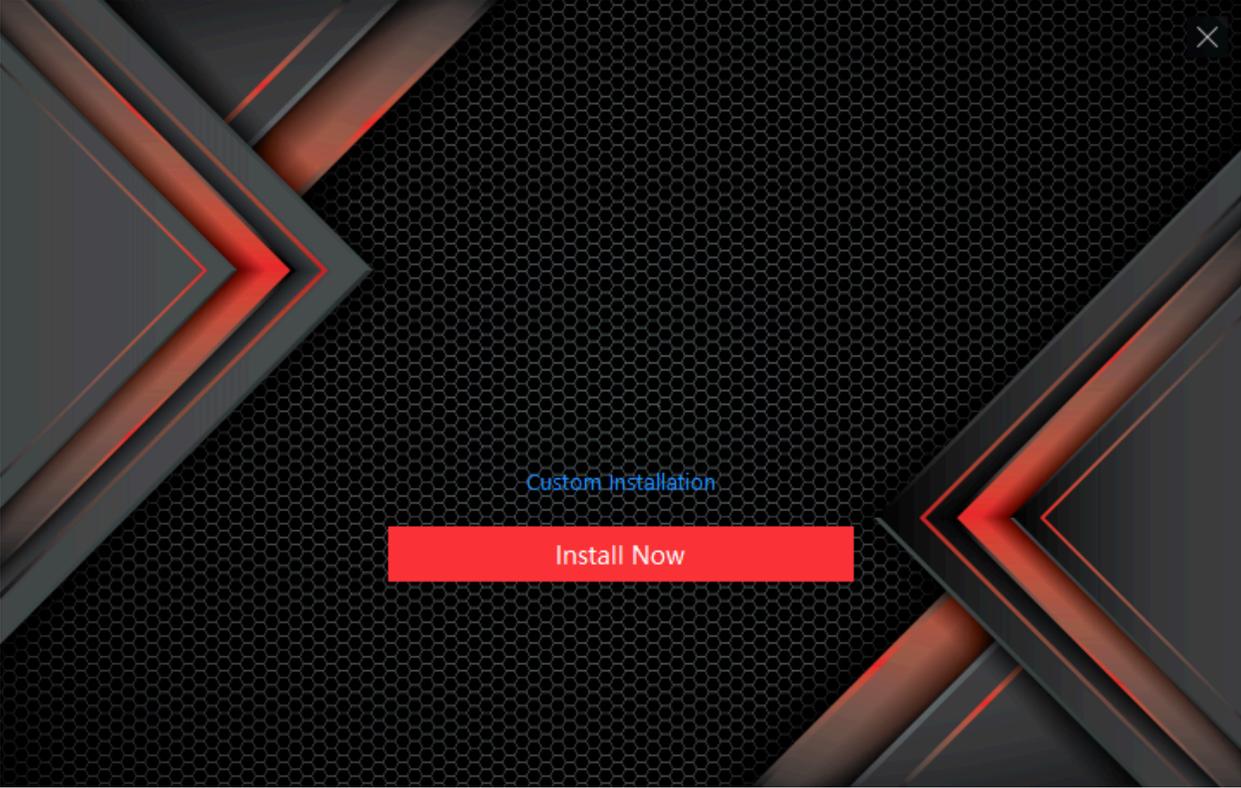

To download the client installation file, log into X-VMS through the browser. In the top right corner, expand the hamburger menu and there will be an option for "Desktop". Click this option to download the installer file. This file can then be transferred to any computer that needs to install the control client.

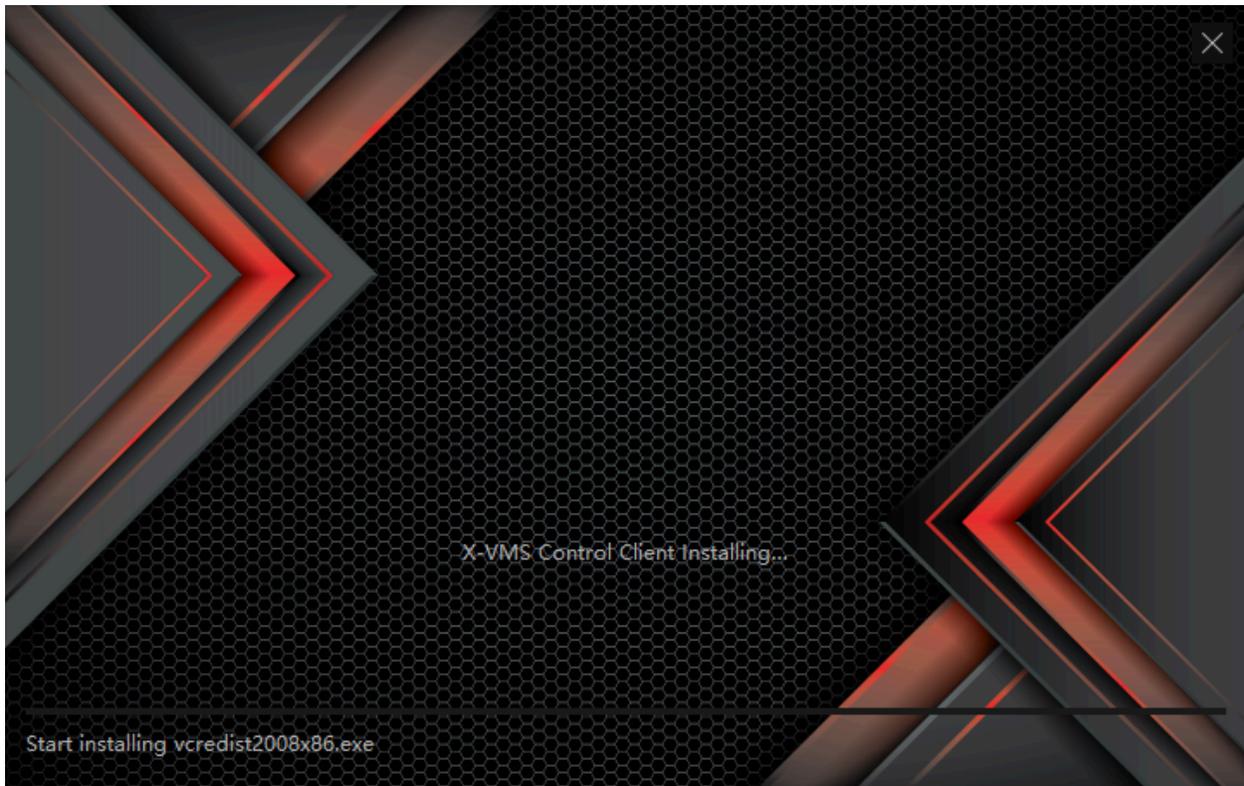

After downloading the file, run the file on the computer to begin the installation process.

Name	Date modified	Type	Size
▼ Last week			
 X-VMS_Control Client.exe	1/12/2026 9:22 AM	Application	308,840 KB
▼ A long time ago			
 Real Analysis	9/24/2024 2:48 PM	File folder	

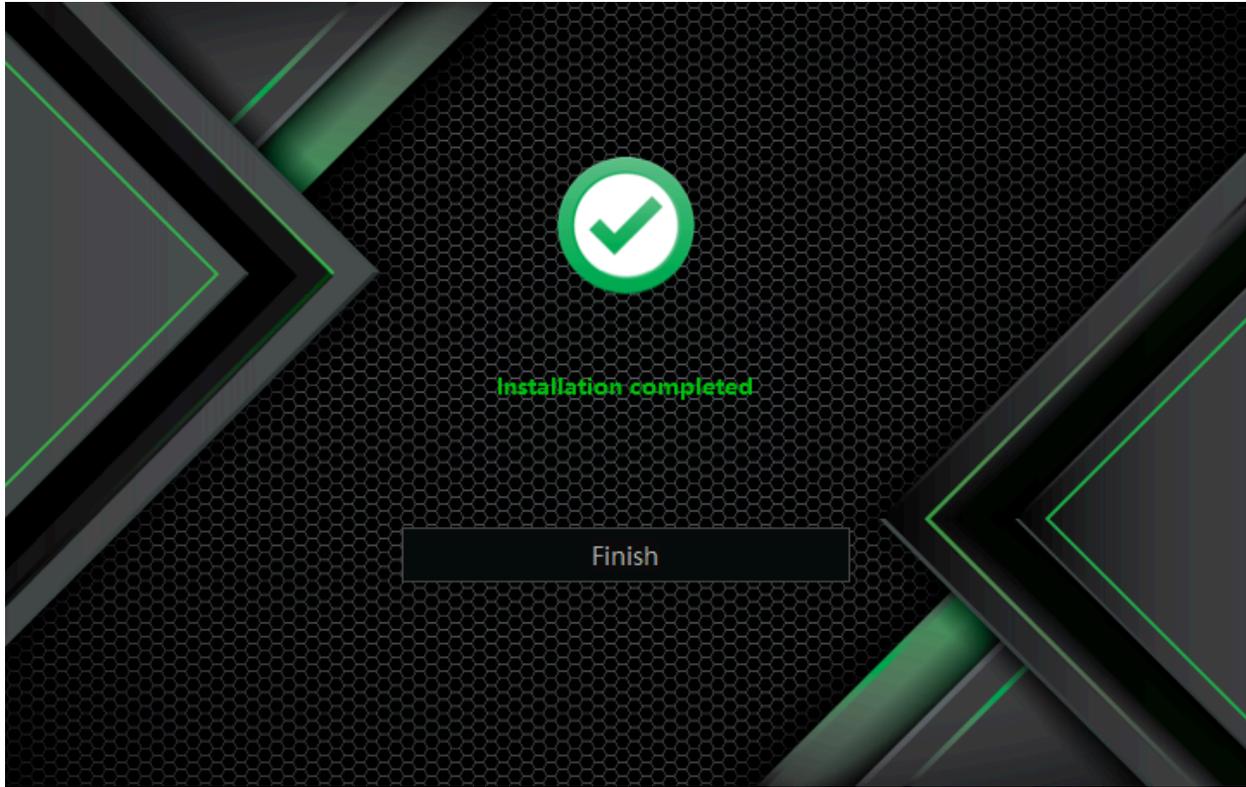

Click on Install Now

UAC prompts will appear periodically during the installation process. Allow them to process with the installation.

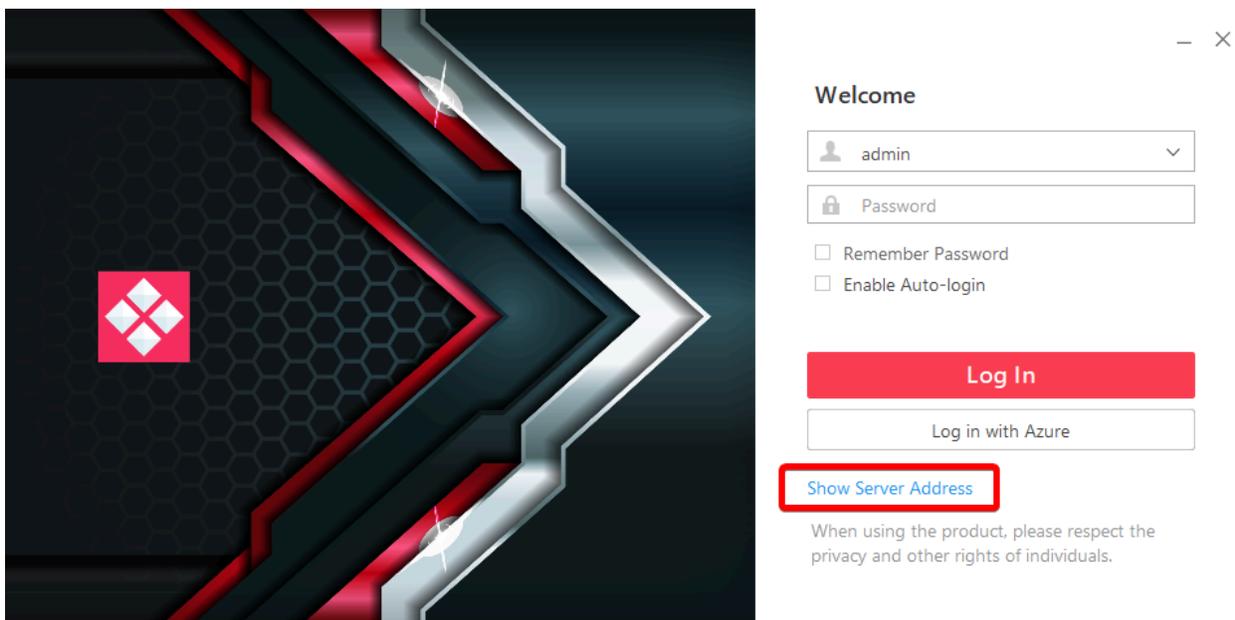

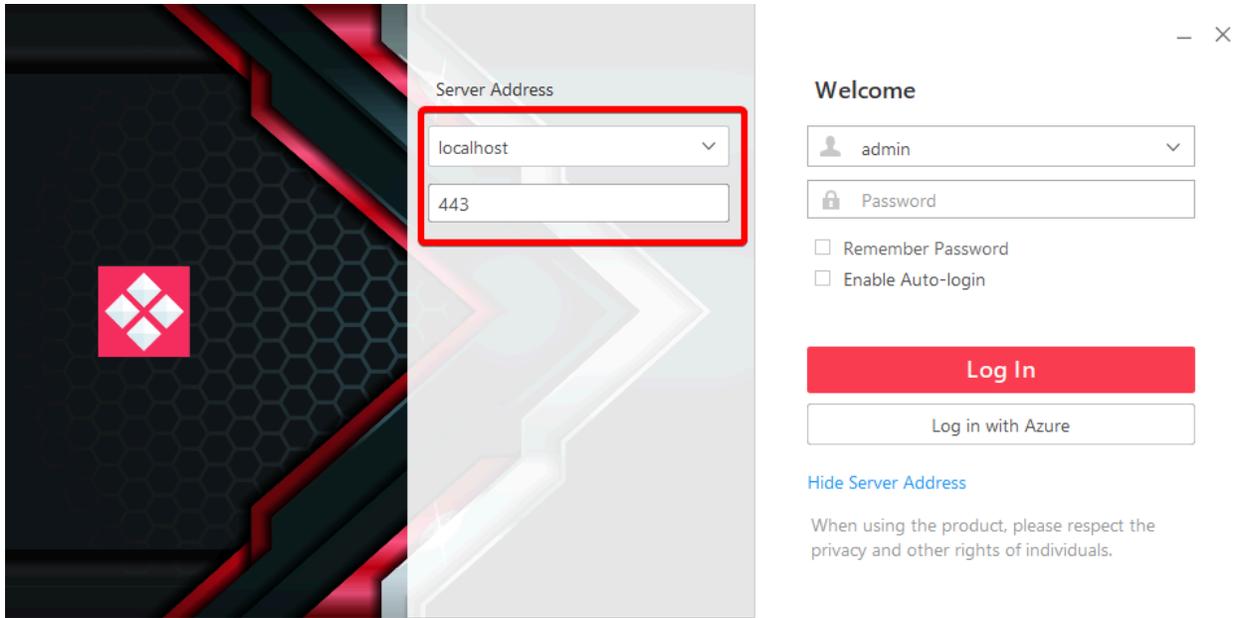

Afterwards, click "Finish" and the installation will finalize.

Operation

Start the X-VMS control client and click "Show Server Address". In the new section that appears, input in the IP address or domain name of the X-VMS server. Afterwards, type in the username and password of the user and click "Log In".

After starting up the software will load up into a Control Panel.
