

# Adding Secondary Access Control Panel

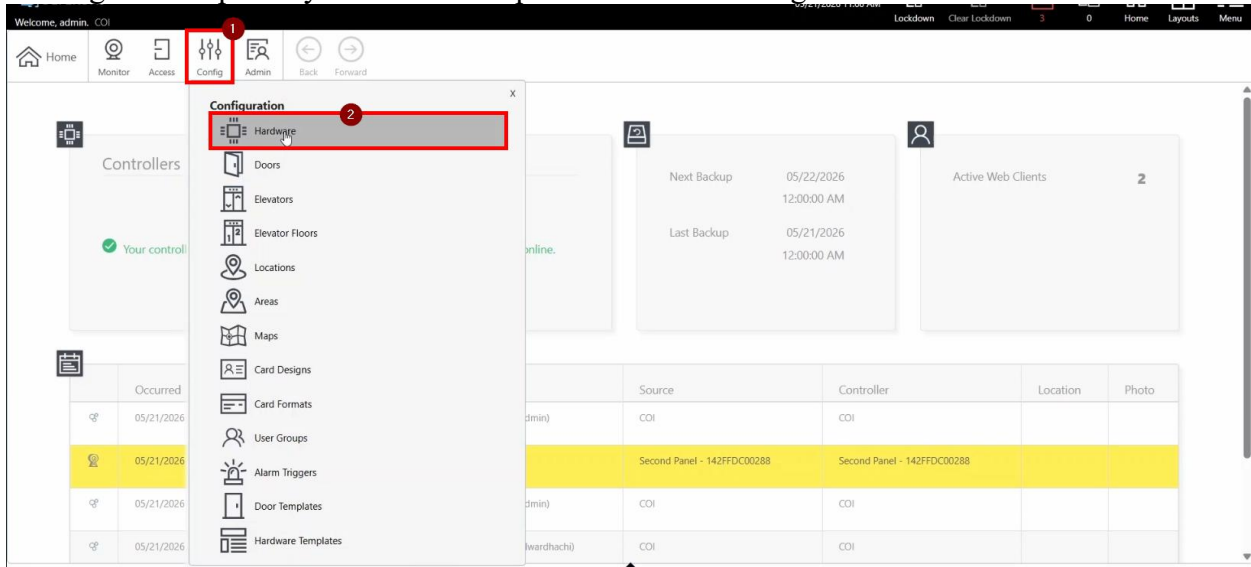

1. Access the secondary access control panel using its default IP address of 169.254.242.202. Within the same window, configure the panel to “Secondary” mode and set up the static IP address.

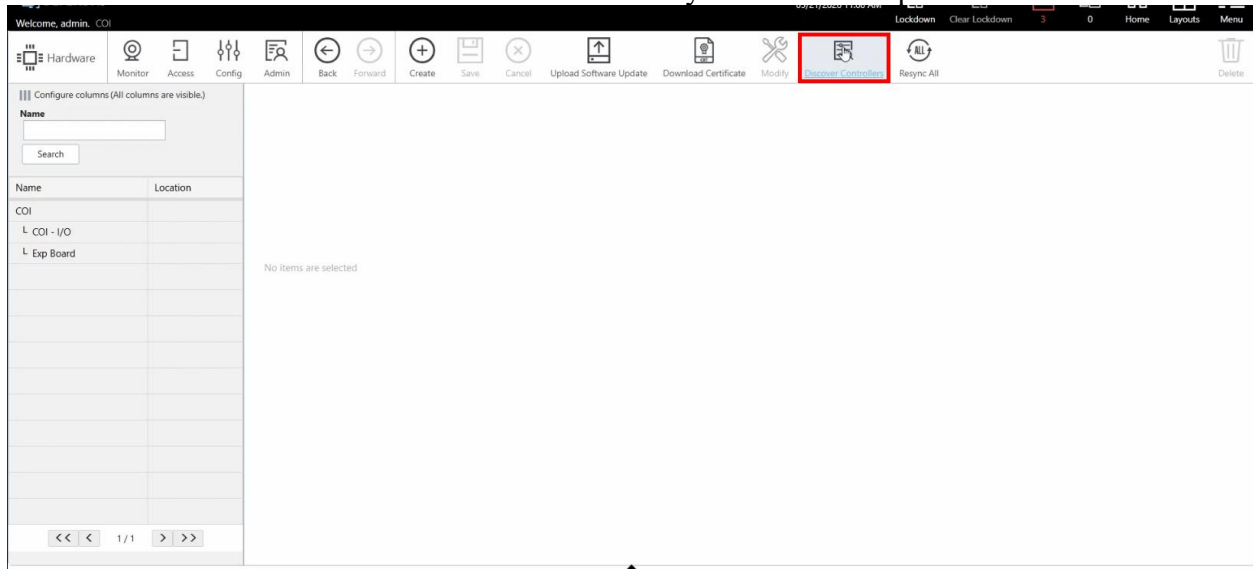

2. If the secondary access control panel is correctly set to “Secondary” mode, there should be only 2 options on its web interface (Monitor and Admin tabs).

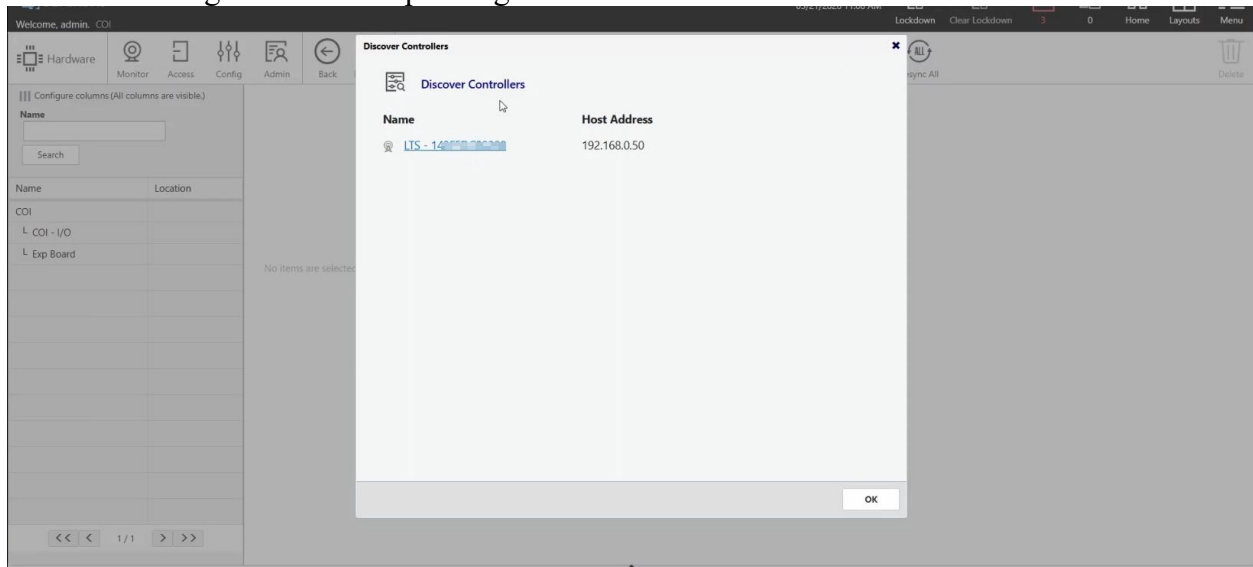

3. Log into the primary access control panel and click Config → Hardware.

4. Click Discover Controllers to locate the secondary access control panel.

5. When correctly set to “Secondary” mode, the secondary access control panel will appear in the list alongside the corresponding IP and MAC addresses.

6. Adjust any options as needed, then press Save.

Model: ST2008 (2 Door)

Configuration: In Only

Name: LTS - 142FFDC00288

Custom Door Names

Name
LTS - 142FFDC00288 Door 1
LTS - 142FFDC00288 Door 2

Host Address: 192.168.0.50

Port: 443

7. Once the secondary access control panel is added successfully, the panel appears in the list on the left.
